REPORT.

STATE OF INDIANA,
OFFICE OF SUPERINTENDENT OF PUBLIC INSTRUCTION, }
INDIANAPOLIS, *January 9th, 1865.*

*To the General Assembly of the State of Indiana,
in Regular Session,*

Gentlemen:—In conformity to the requirements of Section 128 of the School Law, I have the honor to present to you the following Report of the Superintendent of Public Instruction; it being the thirteenth in regular order, and the second bi-ennial report from that officer.

The official reports which have been received at this office from the school officers in the several counties of the State, since the last biennial report to your body, show that the General Assembly, and the friends of common schools, throughout the State, have cause for encouragement in relation to the schools, on account of the manifest improvement in the school funds, school revenue, and the general elevation of the standard of the schools. At no time has our system of public instruction yielded the amount and measure of school instruction, and in many cases not the quality of such instruction which its friends had hoped for from it; yet much progress has been made under its operation, and it appears to me that for the future, much cause of encouragement now exists. From said reports and other means of information, we are enabled to compare our present educational condition with what it was in past years; and from such a comparison, our common schools are shown to be, in most respects, in a better condition than they ever were before. And the prospects of their being still further improved, is better now than it has been at any previous period of their history under our present system. It is thought that a comparison of the results in this behalf for the past year, with those reported in 1863, will assist in obtaining a practical understanding of much of the

details of our school operations, and assist, also, in appropriate legislation on the subject."

Whole number of children between the ages of five and twenty-one years.....	557,092
Increase since 1863.....	28,509
Number of townships.....	974
Increase since 1863.....	8
Number of incorporated towns.....	105
Increase since 1863.....	16
Number of cities, same as in 1863.....	22
Number of school districts in the State.....	7,981
Increase since 1863.....	60
Number of schools within the year.....	7,907
Increase since 1863.....	969
Number of pupils attending primary schools.....	370,964
Increase since 1863.....	97,487
Number of pupils in higher departments.....	19,604
Increase since 1863.....	12,486
Average daily attendance in primary department.....	174,484
(This item not given in 1863.)	
Average daily attendance in higher department.....	11,302
Number of male teachers employed.....	5,274
Increase since 1863.....	781
Number of female teachers employed.....	3,847
Increase since 1863.....	1,406
Number of male teachers licensed within the year.....	3,875
Number of female teachers licensed within the year.....	3,329
(Not given for 1863.)	
Average compensation of male teachers, per day, in primary schools.....	\$1 38
Increase since 1863.....	33
Average compensation of female teachers, per day, in primary schools.....	\$1 07
Increase since 1863.....	44
Average compensation of male teachers, per day, in high school.....	\$2 78
Increase since 1863.....	90
Average compensation of female teachers, per day, in high school.....	\$1 50
Increase since 1863.....	52
Amount expended for tuition.....	\$808,507
Increase since 1863.....	354,608
Average length of school in days.....	87
Increase since 1863.....	19
Number of school houses built within the year.....	443
Decrease since 1863.....	66
Value of school houses built within the year.....	\$347,033
Increase since 1863.....	138,071
Total value of school house property.....	3,472,612
Number of stone school houses.....	64
Number of brick school houses.....	510
Number of frame school houses.....	5,699
Number of log school houses.....	1,350
Total number reported.....	7,623
Amount of special school tax collected within the year.....	\$415,887
Increase since 1863.....	83,489
Number of townships for which average attendance is not reported by Trustee.....	96
Number of towns for which average attendance is not reported by Trustee.....	22
Number of cities for which average attendance is not reported by Trustee.....	5
Number of townships for which amount paid for tuition is not reported.....	35
Number of towns for which amount paid for tuition is not reported.....	15
Number of cities for which amount paid for tuition is not reported.....	3
Number of townships for which special tax collected and expended is not reported.....	135
Number of towns for which special tax collected and expended is not reported.....	29
Number of cities for which special tax collected and expended is not reported.....	4

The foregoing comparison shows clearly that progress has been made in the business of the schools, and that we have realized an actual gain in all the leading elements of the system, within the time to which the comparison relates. If the ratio of progress or gain for the last two years is compared with that of any similar term in the previous history of the system, it will be found to be quite as encouraging. Much as has been accomplished in furnishing tuition in the common schools of the State within the last two years, it has been far short in quantity, and in many instances inferior in quality to what the great body of the people of the State desire and have had reason to expect, and have really expected under the operation of the present system of public instruction. The schools have been continued in session over the State, on an average, eighty-seven days, which, if reduced to months, is four; and only about half the length of time which the people desire, and which would be generally satisfactory to them.

When the present Constitution of the State was submitted to the people for ratification, that provision of it which makes it the duty of the General Assembly to provide free tuition in the common schools, and to open them to all, was received with especial favor. Previous to that time, the free school system of the State was made dependent for most of the necessary revenues for its support, upon the uncertain popular vote of a district, township, town or city, or upon the more uncertain action of trustees, or city council of the local municipal corporations, all of which tended to make such support very precarious and unsteady; and at the time of the submission of the New Constitution to the people for approval, they were very glad to exchange the system then existing, for the one, the foundation of which was laid in new fundamental law. They understood that tuition in the common schools was to be without charge, and equally open to all; and it was readily concluded that such tuition would naturally, and of course, be of a quality, and be continued a length of time that should be reasonable and generally satisfactory.

The present system of common schools of the State has now been in operation more than twelve years, and in no year of that time have the schools been continued so long in session, nor the quality of their teaching and instruction been so good, nor their teachings made to reach so many children of the State, as for the year ending with August, 1864. Yet complaints are heard from nearly every point in the State at which a school is kept, that the

term is too short to accomplish the amount of good desired, and that in many instances the teachers employed are so poorly qualified for the business of teaching, that they advance their schools but little, if any, in the short time the schools can be kept open. These complaints are so common among the people, and so general over the State, that they need only to be mentioned to be recognized by almost every member of the General Assembly as existing in his own immediate school district, city, town, or township, and throughout the circle of his acquaintance.

WANTS OF THE SCHOOLS.

From the facts above stated, and from information derived from many other legitimate sources, and which is probably abundant in the mind of any one who has given attention to the subject, the present great wants of the schools may be stated to be, "longer school term and better qualified teachers."

Within the past year I have availed myself of many opportunities to observe and test the popular sentiment in relation to our system of public instruction, and the common schools, and to ascertain the complaints of the people against them, where any such existed, and to learn the plans for their correction which have revolved in the public mind. Many complaints have of course reached me in relation to them, but none have been so general and urgent as those which relate to the shortness of the school term, and the want of better qualified teachers. For the supply of the first of these great wants there have been three plans suggested, discussed, and considered to some extent. Either one of two of them can be made at once available by the General Assembly for lengthening the schools, so as to make them, in that respect, entirely satisfactory. The other plan contemplates an amendment of the educational provisions of the Constitution, measures for which were acted upon by the Legislature at its regular session for 1861 and 1863, and finally failed, and need only to be mentioned here to be understood.

These plans may be briefly stated as follows:

First. Increase the tuition revenue to a sum sufficient to keep the schools in session a satisfactory length of time.

Second. Reduce the common schools by law to such limits, and in such a manner, that the tuition revenue now provided for by law shall keep them open a satisfactory length of time.

Third. Amend the Constitution so as to return the taxing power for this purpose to the people, and change the provision which requires such taxes to be uniform over the whole State.

The first of these plans I understand to be the most completely in accordance with the popular sentiment on this subject. If it is adopted, it can be at once carried into effect, and be made to supply this great want of the schools. Under its operation, they will be readily elevated to a condition of prosperity, general success, and utility, which the people of the State have long hoped for, and had the right to expect, under our present system, but have never yet realized. This plan is not rendered obnoxious by the several years delay, and the great uncertainty of ultimate success that adheres to the one which is made dependent upon an amendment of the fundamental law. Neither is it objectionable on the score of its letting down the present standard of the schools, and narrowing their scope of usefulness, as is the case with the second plan.

The common schools, when properly graded and conducted, now cover the whole educational field below the colleges and universities. In many instances, students have been advanced in the higher departments of them, to a point of preparation which has been sufficient for their admission to a regular collegiate course in the colleges or universities, without any intermediate academic course of preparation. For the ordinary vocations of life, and for the current demands of business, the measure of knowledge and learning which they furnish are quite sufficient. Such is the present high character for usefulness of many of our common schools, which have been organized as graded schools. A necessity that would require a depression of their high character, or the narrowing of their limits for usefulness, would be deplored by their friends and patrons as a misfortune to the State.

Under the first Constitution of the State, we had the common schools, the county seminaries, the colleges and universities. Our present Constitution abolished the county seminaries, and turned over to the common school fund their entire funds, revenues and property, and left the educational field which they had occupied open for occupancy by the common schools. To now adopt the second plan suggested as an appropriate remedy, appears to be a step in the wrong direction—a going back to the system abolished by the new Constitution—a retrograde step, not in accordance with the popular sentiment, nor with the spirit of the age in which we are called upon to act in this behalf. If these conclusions are cor-

rect, neither the second nor the third plans suggested can reasonably be adopted.

ESTIMATES FOR EIGHT MONTHS SCHOOL.

In considering the first plan suggested for lengthening the schools, it may, perhaps, be desirable to consider in connection with it, the estimates upon which it is based, and which forms its elements. The official reports of the school examiners on file in this office, show the average length of school term of all the schools in the state to be, for the year ending the 31st of August, 1864, eighty-seven days. This, reduced to months, makes a small fraction more than four months. The semi-annual apportionments of school revenue for tuition, one for May, and the other for November, 1864, amounted in the aggregate to the sum of \$892,446 81. This sum may be safely taken as the cost of the four months school for the past year. To double this length of term by providing for eight months schooling instead of four, will probably, in our present and prospective condition, cost double the sum above stated, to wit: \$1,784,894. To provide for this amount of revenue, our dependence must, I think, be upon the following sources of revenue.

<i>First.</i>	Upon our present tuition revenue.....	\$892,446
<i>Second.</i>	Upon the increase of revenue for tuition at the present rate of taxation, produced by the new appraisalment of real estate and the new valuation of other taxable property.....	62,000
<i>Third.</i>	Upon an amendment of the liquor law, so that the sums of money due to the schools, according to its provisions, can be collected summarily and with certainty.....	150,000
<i>Fourth.</i>	Upon directing the income of the Sinking Fund to the schools.....	161,200
<i>Fifth.</i>	Upon an increase of the school tax on property ten cents on each \$100 valuation.....	517,806
Total.....		\$1,789,452

Sixth. Probably upon a little different discrimination in the apportionment of the tuition revenue to the several townships, towns and cities.

In commendation of this plan it may be said, that it is completely within the reach of the Legislature; that it can be made available now; that it provides with certainty for the case in question; and that it works no letting down of the standard, or narrowing of the usefulness of the schools.

It is probably well enough here to consider these several sources of revenue more in detail, they being but briefly mentioned above. The first and second sources of revenue above mentioned, are now provided for by law, and I apprehend no disposition to change them.

The third source of revenue is dependent upon an amendment of the law regulating the sale of spirituous liquors. It was expected by many when that law was enacted, that it would yield to the schools an annual revenue of \$175,000 or \$200,000. The first year after the law took effect, it produced \$69,395 of school revenue; the second year \$49,766; since which time it has fallen lower. The comparatively small amount derived from this source, and its annual decrease in amount, is manifestly due more to an evasion of the law on the subject, than to any decrease in the traffic. It is understood that whenever a person engages in the business of selling liquor without license, that he is indebted to the schools in the sum of fifty dollars, the price of the license. Let this be collected as summarily, and with the certainty that the price of a liquor license is collected under the national tax law, and the schools would at once feel its effects.

The fourth source of revenue is based upon a change in the direction of the income of the State Bank Sinking Fund. That income now mostly goes to augment the fund, and it is proposed to change its direction to the account of school revenue for tuition. The bonds of the State, for the payment of which this fund was originally created, have been paid off, or nearly so, and the income is no longer needed for that purpose. Therefore, in the language of the 114th section of the Bank Charter, it now becomes a permanent fund, to be appropriated to the cause of common school education, in such manner as the General Assembly may direct. There appears to be nothing now in the way of the General Assembly giving to the income of this fund, the direction suggested by the law creating it. In the above estimate I have put down the amount to be depended upon from this source at about what its income amounted to for the year ending with December, 1863. There has been \$350,948 65 of this fund distributed to the counties,

the income from which now goes to the schools. The income from the other portion of the fund can, with great propriety, I think, be given the same direction.

The fifth source of revenue is dependent upon doubling the present school tax levied on property for tuition. By levying twenty cents on each one hundred dollars of the valuation of taxable property, instead of ten cents, which is the present levy for that purpose, would add about \$517,000. We have reached a point in the progress of our school system, at which there appears to be almost or entirely a necessity for such a levy of tax. With it the system can be supported in a satisfactory manner, and without such a levy it cannot be so supported.

No system of instruction, whether for common schools or for the higher institutions of learning, can continue prosperous and satisfactory, unless it is endowed with revenues sufficient for the object of its creation. Our system of public instruction—now more directly under the fostering care of State authority than that of any of the sister States, is no exception to this remark. With sufficient revenues it will be the pride of the State; without them it is a disappointment, an ultimate failure.

These measures for increasing this kind of revenue, are commended to your favor upon considerations of true economy. If the children of the State are to be educated, a great amount of expense must be incurred in doing it. The education of children is expensive at best. It cannot be accomplished without a great and almost constant out-lay of money; and by no private plans can it be so cheaply or so well done as by an efficient system of public instruction. The reports for August, 1864, enumerate 557,072 children between the ages of five and twenty-one years. The foregoing estimate for eight months school is \$1,789,452, which is \$3 21 per child. Can any private plans or effort provide as much schooling for three times that sum? The reports further show that there were 8,894 teachers employed in the common schools the past year, and the foregoing estimate would furnish an average compensation to each of them of \$201 for eight months labor at teaching. These facts clearly show that, even under the proposed increase of revenue, the employment of teaching in Indiana is not one at which the compensation is high in proportion to the time spent, or the labor performed.

BETTER QUALIFIED TEACHERS.

The want of teachers who are well qualified and learned in all the business and art of teaching in, and the government and management of the common schools, is one which is very extensively and injuriously felt in the schools of the State. The great lack in the supply of such teachers, when compared with the demand there is for them, indicates a necessity for the adoption, on the part of the State, of suitable measures for the supply of this want. This necessity is increased by the fact that within two or three years past, a large number of male teachers have abandoned the business of teaching to engage in other business. Many of them ranked high in their profession, and their places cannot be readily filled with others of equal experience and qualifications. In many instances, and almost without exception, the places thus made vacant in the schools, have had to be filled by persons who were not practical teachers; very generally by ladies, who, with reasonable opportunities for improvement, furnished by the State, will more than make good to the schools the temporary loss sustained in effecting the change.

The fact of the existence of this great want of better qualified teachers will not, I apprehend, be controverted by any one. It is too general over the State, and too manifest to all who have children to educate, for it to be questioned. When the existence of the want is recognized, the mind naturally turns to the consideration of plans and means for supplying it. For suggestions upon this subject, we may look with profit to other States.

Wherever the common schools have reached the condition of the greatest excellence, they have been under the fostering care of State authority, and their condition of excellence has been arrived at by means of the agencies employed by the State for the improvement of the teachers. If we consider a few of these agencies in the order of their importance, as they are used in other States, we will find them to be: *First*. Normal schools. *Second*. Teachers' Institutes. *Third*. The formation of teachers' classes in the higher private institutions of learning. *Fourth*. State Teachers' Associations. None of these agencies have ever been patronized by, or received any encouragement from the State.

In view of the limited facilities in Indiana for improving the qualifications of teachers, and the low rate of compensation paid them in most cases, we can not expect young men and young

ladies to incur the difficulty and expense of thoroughly qualifying themselves. Such persons must of necessity be extensively employed in the common schools, because there are no others who can be employed; and the result is poor schools, and a consequent waste of a large amount of real utility and good, which would result to the children of the State, if the schools were made good by first providing well qualified teachers for them. It is a very common remark, a kind of *truism*, that "as is the teacher, so is the school." With *first rate* teachers, the schools will be first rate; with *fourth rate* teachers, the schools can not rank higher than the teachers. In very near proportion as we elevate the teacher in his calling, we improve and elevate the schools; the improving effects of which are witnessed in our sons and daughters who make up the body of such schools.

If the foregoing reasoning is sound, a necessity exists for establishing, and putting into operation, a good Normal school; and for an appropriation for holding Teachers' Institutes; and for holding the State Teachers' Association.

Such schools have no where been failures, but eminent success has, as far as I am informed, always attended them. They are so important to the common schools, and so intimately connected with their success and elevation, that they become great favorites with school officers and teachers, and very popular with the people. Such a school could, I think, be put into operation without the State incurring much expense in providing the grounds and buildings necessary for that purpose. For its endowment and support, so that tuition in it can be without charge, and equally open to all who desire to become teachers in the common schools of the State, I suggest an annual appropriation of \$10,000, from any part of the tuition revenue, except that which is derived from the permanent school fund.

TEACHERS' INSTITUTES.

Teachers' Institutes are highly important agencies for the improvement of teachers, in all the qualifications which make them successful in the common schools. Their teachings should be, and I think generally are, the same in kind, but much less in quantity, when compared with that furnished by the Normal schools.

One of the great causes of the inefficiency in our common schools is the kind of uncertain, indefinite, or haphazard way in which

most of the teachers proceed with, and conduct the business of the schools, for want of a suitable standard in such matters; and the Normal school furnishes such a standard, and the Teachers' Institutes and State Teachers' Association assist in applying it to the schools, and in making it available for their improvement and elevation. I therefore suggest an appropriation of \$100, for each Institute which may be held for five days, under the general direction of the State Superintendent of Public Instruction; and \$100 to each annual meeting of the State Teachers' Association, payable as the appropriation to the Normal school is to be paid, and not exceeding \$2,400 in any one year.

STATISTICAL TABLES.

The statistical tables, and abstracts in detail, as required by the 130th section of the school law, have been prepared from the materials furnished by the proper officers in the several counties, will be found in the appendix to this report, to which attention is respectfully invited. Some of the reports of subordinate officers are very defective, and to that extent the tabular statements are, of course, defective. So far as estimates are based on these reports, they are probably below, rather than above the true point of accuracy; if they lead to error, it is on the safe side. The want of fullness and accuracy in the school reports made to this office is a great source of disappointment in our school statistics. In the proper place I will suggest what appears to be the appropriate correction.

SCHOOL FUND.

The 130th section of the school law requires the Superintendent of Public Instruction to present in his biennial report, plans for the management and improvement of the school funds and revenues. Such plans can be more intelligibly presented after a brief statement of the present amount and condition of said fund and revenues. The second section of the eighth article of the Constitution, provides that the common school fund shall consist of:

- 1st. The congressional township fund, and the lands belonging thereto.
- 2d. The surplus revenue fund.
- 3d. The saline fund, and the lands belonging thereto.
- 4th. The bank tax fund:

5th. The fund arising from the 114th section of the charter of the State Bank of Indiana.

6th. The fund to be derived from the sale of county seminaries, and the moneys and property heretofore held for such seminaries.

7th. From the fines assessed for breaches of the penal laws of the State.

8th. From all forfeitures which may accrue.

9th. All lands and other estates which shall escheat to the State for want of heirs or kindred, entitled to the inheritance.

10th. All lands that have been, or may hereafter be granted to the State, where no special purpose is expressed in the grant, and the proceeds of the sale thereof, including the proceeds of the sales of the swamp land, granted to the State of Indiana by the Act of Congress of 28th September, 1850, after deducting the expense of selecting and draining the same.

11th. Taxes on the property of corporations that may be assessed for common school purposes.

The law requires that the amounts of the congressional township fund, and lands belonging thereto, shall be kept entirely separate from the other part of the school fund, and that the revenue derived from that fund should be kept separate and distinct from the other school revenue for tuition.

Whenever any money or income is derived from any of the other funds or sources of fund above mentioned, and becomes added to the permanent school fund in any of the counties, and invested as such, they thereupon lose their distinctiveness of character and name as above given, and the account of them all is kept under the one general head of common school fund, and the income derived from said fund, is carried to the general account of school revenue for tuition, to which account is carried also the amount derived from the tuition tax, liquor licenses, and unclaimed fees.

There has long been lying in the State Treasury, unproductive of school revenue, portions of Congressional Township fund, Surplus Revenue fund, Saline fund, Bank Tax fund, fund derived from estates without heirs, and Swamp Land fund. I know of no good reason why the money derived from these several sources may not now be invested as permanent common school fund, and carried to that account, and the income from it directed to the account of school revenue for tuition. The Constitution, and the statute enacted in furtherance of it, make these items a part of the com-

mon school fund; but they have never received the direction necessary to make them available as such.

SINKING FUND.

The fifth item of fund above mentioned, or that arising from the one hundred and fourteenth section of the charter of the State Bank of Indiana, is the fund known as the State Bank Sinking Fund, and constitutes a large part of the school fund, and is, for the most part, unproductive of school revenue. There has been something more than three hundred and fifty thousand dollars of this fund distributed to the counties, and there added to the permanent school fund, and is now productive of school revenue at the rate of seven per cent. per annum. The residue of this fund, for all the details of its investment, collection, and general management, is under the control of the Commissioners of the Sinking Fund. The original debt of the State, for the payment of which this fund was created, has been nearly all paid off, there being now but about \$10,000 outstanding, on which the payment of interest has long since been stopped on account of the readiness of the Commissioners to pay the principal sum. The time, therefore, appears to have come in the course of the administration of this trust, and the contingencies have occurred, when, according to the one hundred and fourteenth section of the bank charter, the General Assembly may cause said fund to be made a permanent one, and appropriate it to the cause of common school education, in such manner as it shall see fit to direct.

A large amount of the school fund now held in trust by the counties, was, at the date of the last report from the County Commissioners, March, 1864, lying unloaned in the County Treasuries, for want of borrowers. The amount thus lying, according to said reports, was \$178,526, and I am informed that it has since been considerably increased. If the fund now held by the counties cannot be readily loaned, will it not be unwise to distribute to them as much more for the same purpose?

FORFEITURES.

From the eighth source of augmentation of said fund, as above mentioned, which reads, "and from all forfeitures which may accrue," there has probably been but little added to the permanent fund. *First*, because neither the clause above quoted, nor the sta-

tute enacted to give it effect, define what kind of forfeitures are meant, or intended to be carried by it to the school fund. *Second*, because there is no statute in force requiring officers to pay over or add to the school fund, the money collected upon forfeited recognizances, or upon any other kind of forfeitures. It is easy to see that the money collected upon forfeitures will not be likely to be all added to the school fund, unless there is some provision of law giving it that direction.

I have construed the provision of the Constitution above quoted to include and mean all forfeitures of recognizances which may be taken by a court, or public officer, in the name of the State, of any person who has incurred any liability to the State for which a recognizance is provided by law, and particularly such as are taken of, and entered into by persons who are charged with offences against the penal laws of the State, for their appearance in court to answer such charges. In some of the counties of the State, forfeitures of this kind have been, without objection, paid over by the persons collecting them to the county Treasurer, and carried upon the proper books to the account of permanent school fund.

In at least one of the counties of the State, the clerk of the court, who had collected money upon such a forfeiture, refused to pay it over to the county Treasurer to be added to the school fund, for the alleged reason that there was no law in force requiring such payment to be made by him, and that the provision of the Constitution above referred to, does not include nor mean forfeitures of the kind upon which he had collected the money in question. Upon a careful examination of the law on the subject, preparatory to ordering a suit for the recovery of the money in favor of the school fund, I found that such a recovery was, at least, doubtful. I, therefore, did not sue for it.

In at least one other county of the State, this provision has been construed to include and mean all forfeitures of the kind above mentioned; and all forfeitures in the nature of penalty for non-payment of taxes—from which thousands of dollars have been added to the school fund: and all moneys in the nature of penalty for the forfeiture of the contract for the sale of school lands, as provided by the fifty-ninth and sixtieth sections of the school law; and all moneys in the nature of per centum on the sum bid for school lands, in case of failure to make the first payment upon such bids. From this diversity of practice in the several counties under the present

law, it is manifest that its provisions are not sufficiently clear to produce uniformity and certainty in its administration.

TAXES ON PROPERTY OF CORPORATIONS.

The eleventh provision for the augmentation of the school fund, as above mentioned and numbered, which reads as follows: "Taxes on the property of corporations that may be assessed for common school purposes," has never contributed anything to the permanent school fund. If, by this provision of the Constitution, is meant the one mill tax assessed for tuition, or the special school tax assessed for the purpose of building school houses, furnishing, repairing, &c., then neither of them have taken the right direction, because no part of either kind of tax has ever been added to the permanent school fund. They have been uniformly carried to the respective accounts of school revenue.

Is it not possible that by this provision it was intended that the General Assembly, in enacting a general law for the incorporation of companies, should assess a reasonable tax in some form on their property, for common school purposes, which should go to the permanent school fund as a compensation for the powers and franchises thus granted to them as corporations? It was evidently the intention that, by this provision, corporations should contribute in some way to the school fund.

AMOUNT OF SCHOOL FUND.

According to the latest reports received at this office, the school fund consists of the following items and amounts, to-wit:

Congressional Township School Fund (productive)	\$2,098,367 75
In un-oid school lands, of same fund (unproductive)	157,946 00
In the State Treasury of same fund (unproductive)	347 50
Total Congressional Township Fund	\$2,256,661 25
Common School Fund (productive)	1,393,877 57
State Bank Sinking Fund (unproductive)	3,993,354 81
Swamp Land Fund in State Treasury (unproductive)	71,406 56
Galina Fund, in State Treasury (unproductive)	33,536 09
Bank Tax Fund in State Treasury (unproductive)	22,947 00
Surplus Revenue Fund in State Treasury (unproductive)	643 06
Estates without heirs in State Treasury (unproductive)	5,899 61
Grand total of School Fund	\$7,778,355 94

The two sums above represented as productive, are held in trust by the several counties, for the purpose of being loaned, and amount, in the aggregate, to the sum of \$3,492,245 32, which sum is productive of school revenue at the rate of seven per cent. per annum, amounting last year to \$244,457 17. This, with the further sum of \$1,700, which was derived from the renting of unsold school land, is all the school revenue now derivable from the school fund. This revenue goes entire, without being diminished by any contingent or incidental expenses of management, collection, or disbursement, into the semi-annual apportionment to the schools. If any part of this productive fund lies unloaned in the county treasury, or is unsafely invested, or is lost, so as to yield no revenue or interest, the counties are held liable for the interest on such sums, at the rate fixed by law. I have aimed to settle and balance the interest account with the several counties at the time of making the semi-annual apportionment in October; and when the reports show a deficit of interest for the year then ending, upon the amount of fund held in trust by the county, to collect such deficit from the county. The amount of such deficits collected in October, 1863, was \$3,781 48; and for October, 1864, \$5,217 48. For the details of such collections, you are referred to the tables of the apportionments contained in Statement No. IV, in the Appendix.

The remaining portion of said fund, amounting to the sum of \$4,286,110 62, is at present unproductive of school revenue. Much of this sum yields an annual income which is at present directed to other objects than the schools. That part of the fund which is in unsold land, amounting to \$157,946, now yields but little school revenue, and cannot be made readily productive. The balance, amounting to \$4,128,164 62, can be made at once productive of such revenue by changing the direction of the income from its present object to that of the schools.

There is, according to the Auditor's report, \$145,579 50 of school revenue in the State Treasury, which, under the present law, is being paid up at the rate of \$50,000 a year. On this debt of the State to the school revenue the law provides for the payment of interest; but I am not aware of any law making the State liable to pay interest on any part of the school fund which remains in the Treasury.

The Constitution provides further, on this subject, (section 3 of the eighth article,) that "The principal of the common school fund shall remain a perpetual fund, which may be increased, but shall

never be diminished; and the income thereof shall be inviolably appropriated to the support of common schools, and to no other purpose whatever.

“SECTION 4. The General Assembly shall invest, in some safe and profitable manner, all such portions of the common school fund as have not heretofore been entrusted to the several counties; and shall make provision by law for the distribution, among the several counties, of the interest thereof.

“SECTION 5. If any county shall fail to demand its share of the interest thereof, for common school purposes, the same shall be re-invested for the benefit of such county.

“SECTION 6. The several counties shall be held liable for the preservation of so much of said fund as may be entrusted to them, and for the payment of the annual interest thereon.

“SECTION 7. All trust funds, held by the State, shall remain inviolate, and be faithfully and exclusively applied to the purposes for which the trust was created.”

I quote these sections here because the plans I have to suggest for the better management and improvement of the school funds and revenues are based more or less on them.

PLANS FOR THE BETTER MANAGEMENT OF THE FUNDS.

In view of the foregoing statement of the amount and condition of the school fund and revenues, and for their better management and improvement, I respectfully present the following plans:

First. Direct the payment, to the proper county, of the sum of \$347 50 of Congressional Township School Fund, which is in the State Treasury, to be invested in said county, as the same kind of fund is there invested.

Second. Direct the permanent investment of the other amounts of school fund, which are lying in the State Treasury, amounting, in the aggregate, to \$134,432 32, in the stocks or bonds of the State. See 4th section of 8th article of the Constitution.

Third. Repeal the present law for the distribution of the Sinking Fund, and empower the Commissioners of the Sinking Fund to invest all of said fund in the stocks or bonds of the State, as fast as it can be done, with due regard to economy in the purchase of such stocks or bonds, and revive the law authorizing them to

make loans of said fund. See 4th section of 8th article of the Constitution.

Fourth. Change the direction of the income of the Sinking Fund, so that it shall go into the semi-annual apportionments to the schools. See 3d and 7th sections of the 8th article of the Constitution.

Fifth. Enlarge the limit of loans to be made by County Auditors from \$300 to one person, the present limit, to \$600 or \$1,000; and if the money remains on hand a given time unloaned, direct its investment in State stocks. If the Commissioners of the Sinking Fund are authorized to loan that fund, extend their limit in like manner to \$1,200 or \$1,500.

Sixth. For the increased safety of the investment in stocks or bonds, provide that when a given amount of State stocks or bonds are purchased by the said Commissioners, say \$5,000 or \$10,000, that it shall be canceled, and new stock or bonds issued which shall not be negotiable or transferable, and have no value for any purpose but to secure the fund and the semi-annual interest thereon. See 4th section of 8th article of the Constitution.

Seventh. Define what kind of forfeitures are meant and intended by the provision in the second section of the eighth article of the Constitution, and provide for the better collection and paying over of them to the school fund. Define, also, what taxes on the property of corporations, that may be assessed for common school purposes, are meant and intended by the last sentence of the second section of the eighth article of the Constitution, and provide for the collection and paying over thereof to the school fund. See 2d section of eighth article of the Constitution.

Eighth. Provide a more summary mode of enforcing the liability of the counties for the preservation of the school fund entrusted to them, and for the payment of deficits of interest thereon. See 6th section of 8th article of the Constitution.

Ninth. Provide by law, in detail, for conveying the money derived from estates without known heirs, to the school fund in the county in which the estate is settled. See 2d section of 8th article of the Constitution.

If it is deemed best to adopt these plans, or any of them, the necessary form and details will be readily suggested, for the proper bills or amendments.

Plans for the increase of the school revenue have been presented in connection with the plan for increasing the length of schools.

THE MAGNITUDE OF THE SYSTEM.

A page here devoted to the magnitude of our present system of public instruction may not be void of general interest. Its proportions appear to me to be such as to commend it to the attention of the General Assembly, for the most wise and prudent legislation for the protection and advancement of its interests, and the more complete development of its resources, and the economical application of them to the great task of educating, up to a high standard, the 557,092 children of the State. The amount of money and property permanently invested in it, and the annual revenues which it absorbs for its support, may be stated as follows:

School Fund, permanently set apart by law.....	\$7,784,548
School Houses, lots, and property.....	4,098,423
Township Libraries, estimated value.....	210,000
<hr/>	
Total permanent investment.....	\$12,092,971

The annual revenue used for the support of the system is:

For tuition purposes.....	\$892,446
For special purposes and contingencies.....	449,402
<hr/>	
Total amount of revenue.....	\$1,341,848

The system is diffused and ramified into every community and neighborhood of the State, and in its educational efforts it contemplates including and reaching every child in the State within the school limits, numbering 557,092. If they are not all so included and reached, it is no fault of the system. The reports show, really, that but about seventy per cent. of the children enumerated are got into the schools. The complete diffusion into every minute social subdivision of the State into communities for school purposes, may, perhaps, be better understood by a few brief estimates, based upon the reports from the several counties. There are 33,809 square miles in the State of Indiana. There are 974 civil townships in the State, which, by calculation, are found to average a small fraction more than 34 square miles to each township. There are 7,981 schools in the State, reckoning the children of each city or incorporated town as forming but a single school.

This averages one school to every four and two-tenths square miles, and a fraction more than eight schools to a township, which schools average about seventy pupils each. The permanent investments for the schools amount, as above shown, to \$12,092,971, which is an average of \$21 to each child enumerated. The annual school revenue for special and tuition purposes amounted, for last year, to \$1,341,848, which is an average of \$2 40 to each child enumerated. There were, last year, as above stated, but seventy per cent. of the children enumerated admitted into the schools; and if this calculation is varied, so as to be based upon the number of persons actually admitted into the schools, the permanent investments for the schools will average \$31 per child admitted into the schools, and the annual revenue, special and for tuition, will average \$3 43 per child admitted into the schools. The permanent investments average \$12,415 per township, and per school \$1,515; and the annual revenue last year averaged \$1,377 to each township, and \$168 per school.

NUMBER OF SCHOOLS.

From the foregoing, it is evidently bad policy to increase the number of schools in a township beyond what are barely sufficient, because such increase in number is always at the expense of the length of school term of all the schools in the township. This is practically illustrated in many of the townships. Two townships, having about an equal number of children, would receive from the State about an equal amount of money for tuition. If one of these townships has six schools and the other twelve, the six can be kept in session about twice as long as the twelve can be. To be more explicit, I will mention two townships in Marion county. Washington township has 797 children enumerated, and fourteen schools, which were kept in session, last year, sixty days. Warren township has but eighty-one more children and nine schools, which were kept open 100 days last year. Thus Warren, with nine schools, has forty days more school each year than Washington has with fourteen schools, and the same apportionment per child. If the enumeration is compared with the number admitted into the schools, the ratio is higher in Warren than in Washington. The average attendance is also higher. This same defect in the policy of the trustees, which tends to make the schools shorter by increasing their number beyond the necessity for them, is manifest in

many of the counties. It is shown above that the townships average but about thirty-four square miles each, and that the schools average more than eight to a township of that size, or one to every 4 23-100 square miles.

Increasing the number of schools beyond what are really and practically necessary, is, as practiced in many townships, a very weakening element in our system. If the General Assembly should now double the amount of tuition revenue, with a view to furnishing eight months school instead of four months, and the trustees should double the number of schools, it would, in effect, leave us where we are now, as to length of school. It will, perhaps, be impracticable to reduce the number in townships where the houses are already built; but for the law to set reasonable limits to the number to be built in a township would, I think, be greatly protective of the interests of the schools. Of the 974 townships of the State, 400 of them have less than eight to the township, which is the average number. This fact further suggests the necessity of setting reasonable limits to the number to be built in a township. At an early day in the history of our present system, it was suggested that four schools to a township of six miles square would answer, and that six to such a township would be sufficient.

Limiting the number of schools in a township will do much good in the way of lengthening the schools, and in enabling the trustees the sooner to elevate one or two of the largest of them in the township to the condition of good graded schools, into which he can work forward the more advanced pupils from the primary schools of the township, where tuition can be furnished them in the higher departments of the graded school. It is better that the schools shall be large; the business of educating is much better and more successfully done, and much cheaper done, also, in large than in small schools. The reports show an increase of sixty new schools within the past year. The plan I have to suggest for the correction of the evil mentioned is, to provide by law that no township trustee shall establish more than six or eight schools in a civil township containing thirty-six square miles, and in that proportion in townships containing a greater or less number of square miles.

The present length of official term of township trustees is very generally regarded as being too short to enable them to successfully and economically manage the school matters of their townships. Their plans for building new school houses, making repairs, sup-

plying furniture and school fixtures, and for the levying and collection of special tax for these purposes, usually require more than one year for their performance; and the changing of the trustees in the midst of the working out of such plans, and leave them at that point to be administered and carried into effect or abandoned, as the case may be, frequently works a hardship to the retiring trustee, and embarrassment to the incoming one. It is suggested to extend their terms to two years, to correspond with the length of term of school trustees of towns and cities.

SCHOOL EXAMINERS.

When the present law in relation to the duties of school examiners was enacted, it was a matter of doubt with some of the members of the General Assembly, whether the increased powers which were by it conferred upon them, and the many additional duties which were required at their hands, would result beneficially to the schools. Such doubts, I believe, no longer exist. The friends of the schools, and especially those who were immediately connected with the administration of the school law, had realized the need of a more full and thorough county supervision of the school interests than could possibly be given to them by county auditors, in connection with their ordinary office business. The amendment of the law in this respect has been eminently satisfactory to teachers and school officers, and improving to the schools. The greater care and particularity practiced in examining and licensing teachers, the extensive visiting of the schools, and advising with trustees, directors and teachers, relative to their respective duties, tends much to elevate the character of the schools. It is, I believe, quite clear to those who have given the subject a little attention, that the common schools of the State were never in a more prosperous and successful condition than they have been for the past year. That they never accomplished so much in the way of instructing and educating, nor returned to the people of the State so much real utility in the direction of their proper objects, in any previous year of their history; and I attribute much of that prosperity, success and utility, to the supervisory labor of the examiners.

The compensation allowed to examiners is so small in amount, that in some of the counties they have not been able to visit all their schools in one year. At the time their compensation was

fixed, the enlargement of their powers and duties was regarded by some as an experiment which might not be successful or popular with the patrons of the schools, or of general utility to them, therefore it was thought that \$100 a year to each was as much as ought to be risked upon it, until its usefulness to the schools could be tested by experience. The test, now of nearly four years, has well established the usefulness and wisdom of the measure. In order to make their services more completely available for the improvement of the schools, their pay ought to be increased to a living point at least.

TRUSTEES OF INCORPORATED TOWNS AND CITIES.

Section five of the school law, contains a proviso which has produced some embarrassment. It can scarcely be regarded as a statutory provision for want of definiteness and completeness. It appears to aim at giving towns and cities the right to elect more than one trustee, but does not fix any number above one. It sets no time, it lodges no authority any where, with any officer or board, to determine the number. The practice under it is by no means uniform. In some cases one is elected, in others three, five, nine, &c. Our experience, in most cases is, that each increase in the number, above one, is at the expense of efficiency. It is, I suppose, an imperfection of the kind contemplated by section 128 of the school law, and the correction I have to suggest as appropriate, is to strike out the proviso, and the section will then provide for the election of one trustee.

AGRICULTURAL COLLEGE.

Agriculture with the people of Indiana is the leading interest. Its pursuits receive the attention and labor of a large portion of them. It now is, and must long continue to be, the great source of prosperity and wealth of the State. It is generally admitted, that its great interests are here no further advanced than to a condition of infancy. That it needs the developing influences of knowledge and learning, and of the application of scientific research, to the working out and illustration, for the benefit of those who are engaged in its pursuits, the many processes and apparent mysteries, upon the full development of which its success in a

great measure depends. For this purpose, a College, specially adapted and liberally endowed, is needed. Such a college Congress appears to have had in view in making the liberal grant for endowment, and in applying to the grant the condition that it shall be inviolably appropriated by the State to the endowment of at least one college, where the leading object shall be to teach such branches of learning as are related to agriculture and the mechanic arts.

If such a college is to be endowed and put into operation in the State, will it not conduce largely to the interests of agriculture to establish in connection with it, and under the same trusteeship and general management, a good normal school? Thus teachers could receive, in the course of their preparation as such, a large amount of teaching in such branches of learning as are related to agriculture, the mechanic arts, and military tactics, and could convey much of such teaching to the mass of the people of the State, through the agency of the common schools. The teachings of such schools, and the interests and pursuits of agriculture, are almost or entirely co-extensive in Indiana. Therefore, by adapting, as far as practicable, the teachings of the schools to the development of those interests, and to the assistance of those pursuits, will conduce to the common good.

STATE UNIVERSITY.

This institution is in its usual flourishing condition. Its trustees have, within two or three years, perfected arrangements by which they have permanently opened its doors to the young men of the State, free of charge for tuition. It affords to such young men a rare opportunity for the accomplishment of a thoroughly classical or scientific education, under the instruction and training of a faculty of the finest culture and most liberal and generous sentiments. Professor Owen has recently placed his extensive cabinet in the University, which he very successfully uses in giving instruction in the department of learning assigned to him. This is an additional feature of great interest.

PRIVATE INSTITUTIONS OF LEARNING.

The many private institutions of learning in the State are understood to be in a condition of general prosperity. Most of them

have realized a measure of success, the past year, which has been equal to that of previous years. I had hoped to be able to present, in this connection, much valuable information, which would be of mutual benefit to the institutions, and to the people of the State. But sickness, during the time set apart to the duty of gathering up that kind of information in detail, has compelled its postponement. A tabular statement of statistics relative to most of them, as furnished by the School Examiners, will be found in the Appendix, Statement No. VII, to which attention is invited. It is respectfully suggested to amend the law relative to the incorporation of such institutions, so as to provide for annual reports to this office of such educational statistics as will be beneficial to the institutions, and interesting to the people, and do much towards correcting the erroneous impression which appears to prevail, to some extent, among our own people and abroad, as to the extent of educational facilities in Indiana.

GRADED SCHOOLS.

The statute provides that trustees may establish graded schools, or such modifications of them as may be practicable. This is a very salutary provision. The trustees have been advised that when a school becomes too large to occupy a single room, and to come under the management of a single teacher, to organize it as a graded school, or some modification of such a school, rather than to divide it and organize in another place a new primary school. By keeping the pupils together under one general management, but classified and assigned to suitable rooms and appropriate teachers, according to the grade of their attainments, they make more rapid progress, they become better educated, and it is much cheaper done. In revising the law, will it not be best to fix a limit at, or near which, the trustee shall adopt a modification of a graded school, rather than to divide it and establish a new school of the same grade? When a school is increased in number to a hundred or more in average daily attendance, or when it is so large that two teachers must be employed, the plan of a modified graded school can be profitably applied to it.

DESIGNATION OF TEACHERS.

The provision of the school law for the designation of teachers

by school meetings has been a fruitful source of embarrassment to trustees, and in many instances very damaging to the schools. A large per cent. of the difficulties which have been reported to this office for advice and adjustment, have arisen in attempts to designate teachers. The striking out of the law the provisions on this subject, and giving the employment of teachers entirely to the trustees, has been extensively advised by examiners, trustees, friends and patrons of the schools, who have witnessed the damaging influence of the attempts of meetings to designate teachers. If this provision is repealed, it is probable that the one which requires the dismissal of a teacher upon the petition of a majority of the persons who are entitled to vote at school meetings, and upon due notice and good cause shown, will sufficiently protect the people of the district from the continuance of a teacher who is generally obnoxious to them.

FEMALE TEACHERS.

The reports for a few years past indicate quite a rapid change in favor of the employment of female teachers in the common schools. The proportion of female teachers employed and licensed in the State, has been, for the last five years, as follows:

1859—Employed.....	20 per cent.	Licensed.....	10 per cent.
1860—Employed.....	22 per cent.	Licensed.....	21 per cent.
1862—Employed.....	34 per cent.	Licensed.....	37 per cent.
1864—Employed.....	42 per cent.	Licensed.....	46 per cent.

We cannot reasonably conclude that this change has reached its maximum. We may, I think, expect that the next term of five years will exhibit an equal or greater change in the same direction. I do not mention this as cause for alarm for the safety of our system, or the success of our schools. It is rather cause for congratulation than alarm. It is not uncommon to find them to excel in all the qualities of good teachers. They are more likely to engage permanently in the business of teaching than young men are; and for this reason they will devote more attention to their preparation for teaching. On the subject of the fitness of young ladies to become teachers, and for their extensive employment in the common schools of the State, I will quote a few sentences from Hon W. C. Larrabee's first report as the head of this depart-

ment. They are equally as true and applicable now, as when they were written :

“Some persons seem to think females incapable of teaching and managing schools, so well as might be done by males. Very few, however, who have had experience in the practical process of common school instruction, or who have had charge of Seminaries and High Schools, for the education of males and females in promiscuous classes, will or can hesitate to give females the preference over males, as teachers of all primary and secondary schools. Both by talent and by disposition, woman is peculiarly qualified to be the teacher of childhood.

“That in native capacity to learn, to acquire knowledge, and to become intimately, thoroughly and extensively acquainted with all the branches usually taught in common schools, in academies, and in High Schools, females are inferior to males, is a notion wholly groundless. It is merely the result of prejudice, of opinions formed from careless observation, of conclusions founded on delusive premises and false reasoning. I profess to know whereof I affirm. I have been actively and laboriously engaged in teaching for more than thirty years. During the larger portion of that time, my pupils have been of males and females in nearly equal numbers. The classes in the common and the higher branches have been made up of both sexes, pursuing the same studies, using the same text books, and reciting at the same time, in the same room, to the same teacher, under the same discipline, and subject to equal chances for exhibiting their talents and attainments. And I have yet to learn that *intellect* is capable of sexual classification and distinctions. If there be any difference in the capacity of the sexes for learning, it is, so far as the branches required in the public, primary and secondary schools of Indiana are concerned, in favor of females. They are more *apt* to learn than males, more quick in their perceptions, more lively in their apprehensions, and fluent in their expression of thought. Nor are they usually deficient in capacity and patience to master the higher branches, and the more difficult and abstruse subjects. Some of the finest classical scholars I ever instructed were females. Some of the best mathematicians I have ever taught were females. The best algebraist that ever recited to me was a female, who had earned with her needle, in a tailor's shop, the means of paying her expenses, and educating herself for usefulness at the Academy. The best reciter of geome-

try I ever saw, was a fair young girl, of beautiful person and delicate sensibilities.

"Females are not only *apt to learn*, but they are peculiarly *apt to teach*. They seem designed and fitted by nature as the appropriate educators of childhood. They seem to comprehend by instinct and by intuition, the physical necessities, the intellectual wants, and the moral longings of children. And it seems their peculiar province to train, influence, and govern children. It is natural for them, their instinctive propensity to love, cherish, caress, amuse and instruct the young. And it is equally natural for children to love females, to yield to their influence, and to be persuaded by them to obedience.

"It is only a class of weedy, green, good for nothing boys, who entertain sentiments of disrespect for the instructions and influence of female teachers—boys, who seem to have forgotten that their mother was a woman—who seem incapable of the delicate sentiments which the society of virtuous and beloved sisters should always inspire."

The extensive employment of young ladies as teachers, tends to lessen the cost of the schools, and consequently to lengthen their school terms. They do not generally ask or expect so high a rate of compensation as young men do. This may appear to be unjust, yet the fact exists, and it is our constant experience that young ladies very generally offer for employment as teachers, and accept such employment at the hands of the trustees, at rates of pay much below what would induce young men to accept the same employment. This practice is not, I believe, confined to Indiana, but is co-extensive with the human race, and extends to all employment which is equally adapted to both sexes. In Maine the compensation of male teachers per month is \$22 01, of female teachers \$8 76. In New Hampshire males \$18 35, females \$10 12. In Vermont males \$20 48, females \$8 16. In Massachusetts males \$41 71, females \$13 95. In Connecticut males \$26 02, females \$10 14. In Michigan males \$28 17, females \$12 42. In Iowa males \$21 76, females \$14 24. In Indiana males \$42 11, females \$27 72. From this statement of relative compensation in several of the States, we may conclude that it will continue to exist, and to operate as a reason for the extensive employment of female teachers in the common schools of the State.

REVISION OF THE SCHOOL LAW.

The hurried manner in which the revision of the school law was acted upon by the General Assembly, in 1861, left in it many inaccuracies and imperfections, and caused the displacement of some sections and omission of others; some of which render the provisions in which they occur, or to which they relate, nugatory and inoperative, or ambiguous. A careful revision and codification of the law relating to the common schools of the State is much needed. During my term of office, a very considerable part of the correspondence of the office has grown out of these imperfections and omissions, and when such correspondence has indicated the necessity for an amendment to the law, I have made it an object to note the defect and make the proper memorandum, so as to be able to suggest, to the proper committee, the amendment needed. For the purpose of rendering the school law more complete and practicable in its provisions, I shall be pleased to communicate any information in my possession which will tend to the furtherance of this object. To mention the needed amendments in detail, would be too tedious in this place.

Some other sections of the law, which have relation to the school system, need amendment so as to give them efficiency.

Section 7, page 10, 2d vol. R. S., needs amending so as to include all unclaimed fees, and money collected on forfeited recognizances; and a list of all judgments of fines, and on forfeited recognizances, should be reported to the county board, and with their report to the Superintendent of Public Instruction, such lists should be reported.

Section 21, page 500, same volume, needs amending to the same effect.

Sections 11 and 12, pages 14 and 15, same volume, needs amending so as to get the treasurer charged, on the books of the auditor, with the money received, and the auditor to loan the money.

Chapter 49, on page 316, 1st vol. R. S., needs a supplemental section, providing for reports of officers of private institutions of learning to Superintendent of Public Instruction.

Section 3, of chapter 43, page 303, 1st vol. R. S., needs to be so amended as to include the office of Superintendent of Public Instruction.

Section 12, chapter 37, page 292, 1st vol. R. S., needs to be amended so as to include the office of Superintendent of Public Instruction.

Chapter 93, Acts of regular session of 1861, page 171, needs amending so as to put the time of payment into the State Treasury to the first or second Monday in May. The April apportionment of school revenue is made on the fourth Monday in April, and time should be given to complete it, and to forward to Treasurers and Auditors a printed statement of such apportionment before they are required to pay the balance into the State Treasury.

TOWNSHIP LIBRARIES.

Next in importance in an educational point of view, to longer schools and better teachers, is the township libraries. They have been of vast utility to our educational system. They render the art of reading which is learned in the common schools, immediately and practicably available to the student, by furnishing within convenient reach, the means of the agreeable exercise of that art, in reading to the family circle, from some one of the many excellent works of the township library, greatly to the pleasure and profit of the family, and to the generous satisfaction and pride of the parents, who thus witness and enjoy the fruits of their efforts to educate their child. I will repeat here a sentence or two which was addressed to the Governor in the eighth report from this office.

"It is well known to all that the law which called into existence this excellent auxilliary educational force in this State, was limited in its operation to two years, and after the expiration of that limitation it was revived and again limited to one year, which last limit expired with the year 1855. By the operation of the library provision of the school law, even with the limitations above mentioned, there were very good libraries, which were respectable in their number of volumes, placed in every township in the State. Most of these libraries have been extensively used in connection with the schools, and have done much to enlarge the measure of general intelligence amongst the mass of our people, and to form habits of reading and studiousness in the young persons of the State, nearly all of whom have easy access to these libraries."

Very little complaint as to the policy of the State in furnishing school libraries to the several townships has ever reached me. The

most common complaint which is made to me in relation to them is for want of means to replenish the libraries with new and additional works, and to keep them in repair. In some of the townships I am informed that individuals have read nearly or quite every book in the library, and call loudly for more. The reports as to the number of volumes taken out of the several libraries within the past year is very defective, but enough is furnished to show that they are extensively used throughout the State.

“A permanent annual revenue, small when compared with the original revenue for that purpose, is much needed for the support of this feature of our educational system.”

The tenth of a mill on the dollar of property would produce a little more than \$50,000, which, if economically applied, would keep them in repair, and make respectable additions to them each year. The division of the libraries in many of the townships has, no doubt, been bad policy. If additions are to be made to them, I would suggest that the law should provide that such additions be made upon the condition that the trustee should furnish a suitable book-case for them, and bring the whole library together, under the immediate care of the trustee, or a suitable librarian whom he might appoint; and furnish a blank book suitably ruled, in which shall be kept an account of the books taken out and returned, and that a statement of the number shall be included in his annual report to the examiner.

I have been induced to discuss this subject to some extent, and to again urge upon the Legislature to make provision for reasonable, not large, annual additions to these libraries, and for the better care of them, under the full conviction that if such provision is not soon made, that they will mostly or entirely waste away and disappear, and the immense amount of money invested in them be lost to the State, and this powerful auxilliary educational agency will be lost also to the schools.

REPORTS OF SCHOOL OFFICERS.

The knowledge we get of the good or bad working of our school system, and of its magnitude, and general condition for usefulness, is derived mainly from the reports of school officers. The blanks for these reports, and the accompanying regulations for filling them up, have been revised from time to time, and simplified and reduced to an intelligible form, so that the proper officer, by a little

careful study of them, can fill them completely full, and with entire accuracy. A portion of these reports are found to be full and accurate, and in that respect reflect great credit upon the officers through whose hands they pass. Others are exceedingly deficient and inaccurate. There is no good reason for this. It is believed that all the trustees enumerate the children of their townships, towns and cities accurately, and report the same to the Examiner, because the apportionment of money to them is dependent upon such reports, and their fullness and accuracy are required to be sworn to. This is suggestive of the proper method of securing fullness and accuracy in the other reports. If the apportionment of tuition revenue to a township, town, or city, is made contingent upon full and accurate reports, and the money stopped until such reports are rendered, and the officer required to verify them by his solemn oath, as to fullness and accuracy, they will undoubtedly be made. Instead of saying such reports cannot be made, there will most assuredly be some way contrived to make them.

The State furnishes to trustees annually nearly a million of dollars to be expended by them for tuition in their respective townships, towns, and cities; and it is but right to require said officers to report fully, accurately, and promptly, all matters relating to the common schools, and particularly that which relates to the receipt and expenditure of said money. To say that a trustee cannot make such a report is to say that he cannot count the number of school houses in his township, town or city, or the number of teachers he has contracted with, or that he cannot state the rate of compensation he has agreed to pay to them, or that he cannot count the money which he received from the county treasurer, or that he cannot state these amounts in figures. I apprehend that no trustee is incapable of doing these things. A man of ordinary business qualifications can make out the statistical report of the trustee in less than half an hour. The reports show that one hundred and seven township trustees, and the school trustees of twenty-four incorporated towns, and of one city, failed to report the amount of tuition revenue apportioned to them within the last year. The amount of revenue which they have thus received and failed to render a report to the Examiner for, probably exceeds \$110,000. Instead of stopping this distribution of money until reports are rendered for what is already received by said trustees, we will have to furnish them as much more next year, on the same unsafe terms, unless the law is amended so as to cause said reports

to be made. There are one hundred and twenty-three school corporations from which no report was received of the average school attendance. There are one hundred and sixty-eight from which no report was received of the amount of special school revenue which was received or expended within the year. Many other omissions occur, which render the reports unreliable and very disappointing to those who consult them with the expectation of getting accurate accounts of the schools.

These reports are the only means of supplying to the Legislature and to the tax-payers of the State, evidence of what is done with the money paid and appropriated. The plan I have to suggest as the appropriate correction of the defects mentioned is, to stop the money until full and accurate reports are rendered. In revising the law, it will be easy to apply this much needed correction.

STATE BOARD OF EXAMINERS.

There is a feeling manifested among the teachers of the State, which has become very general with the older members of the profession, in favor of suitable provisions being made by law for the issuing of teacher's licenses, or diplomas, in accordance with such regulations as may be found to be expedient, such license to be good in any part of the state, and for the lifetime of the holder, unless revoked by the authority which granted it, upon due notice, and for good cause shown. It appears to be a very unnatural, useless, and burdensome requirement, that teachers, who are eminent in their profession, shall be required at short intervals, from six months to two years, to incur the trouble and expense of procuring a new license to teach. Such a requirement is not necessary for the good of the schools. The difficulty in the way of extending the limit of a teacher's license to the whole State, and to a longer time, is the want of a suitable Board of Examiners to conduct the proper examinations and grant the licenses.

The great object in providing for the issuing of such licenses should be to materially elevate the standard of qualifications of teachers for the common schools. The best literary and professional attainments, and high moral standing, should be required as conditions precedent to the granting of such a license. These qualifications should be determined by a critical and thorough examination of applicants for such licenses, by a competent board of exam-

iners, whose jurisdiction should be co-extensive with the state, and their powers and duties prescribed and regulated by law.

To authorize county school examiners to grant perpetual licenses to teachers would probably tend in a great measure to defeat the object in view, by making such licenses to issue as a kind of matter of course, and dependent more upon the length of time employed in the business of teaching than upon great efforts for literary, professional and moral excellence. The standard of qualifications for such a license should be held high, so as to induce applicants for examination to make great efforts to reach the point, and excell in all the requisites of good teachers. The proceedings for obtaining the license should be such as to satisfy all persons that it is the best of evidence of eminent professional ability, and as such is entitled to full respect.

A Board of Examiners, to which these duties might be safely assigned, might be formed of the State Superintendent of Public Instruction, and the superintendents of common schools of the four or six largest cities of the State. These are men whose attention is almost or entirely occupied with the common schools. They are brought into nearness with the best of teachers, and are in the constant practice of estimating and judging of their qualifications. There are no men in the State who would be more completely prepared to assume such duties. With a little consultation, the time of their meeting could probably be so fixed as not to interfere with their other duties. Such Board could, I think, with propriety and with great benefit to the school system, be charged with all the duties of the State Board of Education. They obtain the positions they occupy on account of their sympathy with the schools, and on account of their complete fitness to conduct and manage them.

STATE REFORM SCHOOL.

The second section of the ninth Article of the Constitution reads as follows:

"SEC. 2. The General Assembly shall provide Houses of Refuge for the correction and reformation of juvenile offenders."

At the session of the General Assembly for 1855, an act was passed authorizing and requiring the Governor, Treasurer of State, and Superintendent of Public Instruction, to purchase an eligible site for a House of Refuge or Reform School, for the employment, instruction, correction, and reformation of juvenile offenders, and

to procure, under certain limitations, plans, specifications, and estimates, for the necessary buildings for such House of Refuge or Reform School; and to prepare and mature a system for the management and government of such House of Refuge, and ascertain what laws will be necessary to put the same into successful operation. I am not aware that the officers mentioned have made much progress in the duties here assigned to them, beyond the purchase of a tract of land for a site for such House of Refuge or Reform School.

The necessity of such an institution in Indiana, I take for granted to be well settled. Juvenile offenders must be reformed by the generous efforts of the State, or when they become adults they must be supported at the expense of the State in the prisons, or otherwise punished for crimes. Whatever institution of this kind, for such a purpose, may be provided for by the State, must, of necessity, be educational in its nature, and may very properly be connected with the educational system of the State; and if so, the name Reform School, as used in the statute, would probably be more appropriate than House of Refuge.

There are institutions of this kind in several of the States in successful operation, working out a great measure of good, by the reclamation of many young offenders from idleness and crime to habits of industry and usefulness. The one in the State of Michigan, near Lansing, appears to be well adapted to the purposes of such an institution, and giving good satisfaction to its officers and to the State. A similar one would, I think, be equally well adapted to the necessities of Indiana. I, therefore, for the purpose of general information, copy a page or two from the descriptive part of the report relative to that institution:

“A farm of thirty acres belongs to the Institution, four acres of which are enclosed by a high board fence, and the building in front. Within the enclosure are located the shops and other buildings belonging to the Institution, except the barn and tool-house. Ten acres are under constant cultivation, on a portion of which is planted an orchard of two hundred and ninety-two thrifty young fruit trees, apple, pear, plum and cherry. The remaining sixteen acres are used as pasturage and lawn.

“The yard in front of the building, containing five acres, is surrounded by a neat picket fence, and laid out in drives and walks, and ornamented with trees and shrubs.

"The grounds enclosed by the high fence are devoted to the pleasure and comfort of the boys, on a portion of which a gymnasium is erected, which adds materially to their health and enjoyment.

"The center building of the house proper fronts west, and is forty-eight feet wide, fifty-six feet deep, and four stories high. There are two wings, extending north and south, each ninety-five feet long, thirty-three feet deep, and three stories high, excepting the towers at the extremities, which are four stories high. On the first or ground floor of the center building are a kitchen and dining room for the Superintendent, a store-room and laundry. On the second floor are a reception room, parlor, Superintendent's office and private room. On the third floor are rooms for the officers and employees. On the fourth floor is the chapel, suitably arranged, and furnished for seating four hundred persons.

"On the first floor of the north wing are the dining hall and wash room for the boys. Adjoining the dining hall, in a small addition, are the kitchen, bakery and boiler-room, the latter being also used as a laundry for the boys.

"On the second floor of the north wing are the hospital, medicine room, a dormitory, arranged for sleeping forty-two of the smallest boys, and bed-rooms for officers and employees. On the first floor of the south wing are a school room, seated for forty-two boys, an ironing room, and a tailor's shop. On the second floor are a large school room, capable of seating one hundred and sixty boys, two recitation rooms, and a library. The upper floors of the two wings are arranged with dormitories, and furnish separate sleeping apartments for one hundred and fifty-two boys. All the rooms in the building are warmed by means of stoves.

"A brick shop, twenty-five by eighty feet, two stories high, containing four rooms, has just been erected in the north-east corner of the yard, affording abundant room for the employment of eighty boys; adjoining which is an engine room, twenty by twenty-five feet."

This institution is understood to be of a capacity sufficient for the accommodation of two hundred boys. The number of its inmates at the date of last report was two hundred and seventeen. The annual expenses of the institution is about \$22,000. The officers and employees of the school are as follows:

Officers.

Superintendent.
 Assistant Superintendent.
 Four Teachers.
 Matron.
 Chaplain.
 Physician.

Employees.

Overseer of Tailor Shop.
 Overseer of Shoe Shop.
 Three other Overseers of Shops.
 Watchman.
 Teamster.
 Cook.
 Laundress.

Aggregate salaries of officers and employees, \$5,612 93.

SUPERINTENDENT OF PUBLIC INSTRUCTION.

The law contemplates that the Superintendent of Public Instruction, as the head of the school system of the State, shall, in accordance with the law on the subject, form, work out, adopt, and successfully carry into effect suitable plans for the establishment, organization, management, and government of the common schools; and for the regular carrying on and administration of the system of public instruction in such a manner as to accomplish by it, in an effectual manner, the objects of its creation. Such plans, in order to produce the greatest amount of success, in the management of the schools and administration of the system, cannot be limited to two years. The term of the office is limited to two years, which, in effect, sets a like limit to all plans for the management and administration of the business. Such frequent changes in relation to this important business, must, I think, strike all who have given attention to the subject, as being a very weakening element in our system. The most complete success of this great enterprise depends upon the wisdom of the plans for its management and administration, the permanency of the policy for applying them and carrying them into effect, and the uniformity and steadiness with which that policy is administered. One of the obstacles in the way of this complete success is the shortness of the official term.

Another obstacle in the way of success is the want of sufficient available force in this office to perform in a good, business-like manner the labors and duties of it. This report, for instance, has been made under the pressure of other important labors and duties, under the lash, as it were, at irregular intervals, which has compelled me to omit much which I would have been glad to present by way of argument or illustration.

At the close of my former term in this office, I invited the attention of the Legislature to these imperfections in the system, and suggested what appeared to be the appropriate correction of them, which suggestions are as applicable now as they were then, and are as follows :

First. Amend the Constitution so as to increase the length of the official term of the Superintendent from two to six years, to correspond with that of the Judges of the Supreme Court.

Second. Amend the law so as to provide for a Deputy Superintendent.

Third. Amend the law so as to provide for two clerks and a messenger for the department.

Fourth. Amend the law so as to put the Superintendent on an equal footing with the heads of the other departments as to compensation.

The Deputy Superintendent should probably be nominated by the Superintendent, and appointed and commissioned by the Governor. The duties should be so divided between the two officers, that one should take charge of all that part of the business which relates to the finances, keep accurate accounts of the school funds and school revenues, and apportion the revenues, and see that they are faithfully applied to the schools. The other should take charge of all which relates to the organization of the schools, their management and government, hold teachers' institutes, look after the interests of the normal school, if one is established, lecture, visit the counties and the schools, as far as practicable. Each one, with this division of labor, with his efficient clerk, would have enough to do.

It has been suggested by some trustees that the law should be so amended as to prohibit the use of the school houses for any other purpose but the common schools. In some communities the school houses are much needed at times for other use, which other use is often of great convenience to the community.

In closing my official connection with the cause of the common schools of the State, which I have loved most dearly, I have to express high hopes for their future success.

SAMUEL L. RUGG,

Superintendent of Public Instruction.

APPENDIX.

- I, II, III. Examiners' Statistical Reports by Townships, and Summary of said Reports by Counties, for August 31, 1864.
- IV. Apportionments of School Revenue for Tuition for April, 1863, October, 1863, April, 1864, and October, 1864.
- V. Tabular Exhibit of the amount and condition of the School Fund for March, 1864.
- VI. Condensed Statement of the number of persons Licensed as Teachers of Common Schools, for the year ending May 31, 1864, and names of Examiners.
- VII. Private Institutions of Learning of grade above the Common Schools.
- VIII. Comparative Statement relative to Enumeration of Children, School Revenue, and School Fund.
- IX. Average Length of School in the several Counties, for the year ending August 31, 1864.
- X. Statements of Examiners relative to Schools, condensed from their September reports, 1864.

STATEMENT NO. 1.

The County School Examiners' statistical reports to the Superintendent of Public Instruction, for the year ending on the 9th of September, 1864, can, on account of their great length, be more conveniently printed in tabular form by dividing them into three distinct statements.

Statement No. 1, gives the first twenty-seven columns of said reports, to-wit: the names and numbers of school corporations; the enumeration of children for school purposes; number of schools in each township; number of graded schools; pupils admitted to the schools in each township within the year; and average attendance, and teachers employed.

There is also appended to Statement No. 1, a summary for the whole State, by counties, for that part of said reports.

STATEMENT NO. 1.

NO. 1. ADAMS COUNTY.

No. of Township, Town or City.	Enumeration of children between 5 and 21 years of age.			No. of Districts in which a School was taught within the year.	No. in which no School was taught within the year.	Total number of School Districts in Township.	No. of Graded Schools in Township.	No. of Schools which are not Graded.	No. Pupils admitted into School within the year.				Average attendance during the year.				No. of Teachers employed in the several Departments of the Schools within the year. STATEMENT NO. II.

The County School Examiners' statistical reports to the Superintendent of Public Instruction, for the year ending on the 9th of September, 1864, can, on account of their great length, be more conveniently printed in tabular form by dividing them into three distinct statements.

STATEMENT No. II gives twenty-two columns of said reports, to-wit:—the average compensation of teachers, male and female, and of the several grades; the average length of school taught within the year; number of school houses built within the year, the number previously built, the material of which built, the estimated value of them, and of school house lots and other school property; and the total estimated value of all school property.

There is appended to Statement No. II. a summary, for the whole state, by counties, for that part of said reports.

STATEMENT NO. II.

NO. 1. ADAMS COUNTY.

Corporate name of the Township, Town or City.	Average Compensation per day of Teachers employed in the several Departments of the Schools.										Length of School taught within the year in days.	No. of School Houses built within the year and not before reported.	No. of School Houses previously built.	No. and kind of School Houses in Township, Town or City.				Total number.	Value of houses built within the year, including Seats, Desks, Out-Buildings, &c.	Estimated value of all other School Houses, including Seats, Desks and Out-Buildings.	Estimated value of School House Lots, exclusive of Buildings.	Estimated value of School Furniture, Globes, Maps, Charts, Books for reference, &c.	Total estimated value of all School Property.
	Males in Primary Department.	Females in Primary Department.	Of both in Primary Department.	Males in Intermediate Department.	Females in Intermediate Department.	Of both in Intermediate Department.	Males in High School Department.	Females in High School Department.	Total in High School Department.														
1 Union.....	\$0 97	\$0 62	\$0 79	132	6	6	\$5 17	\$17,100	\$1,165	\$769	\$19,551

STATEMENT NO. III.

The County School Examiners' statistical reports to the Superintendent of Public Instruction, for the year ending on the 9th of September, 1864, can, on account of their great length, be more conveniently printed in tabular form by dividing them into three distinct statements.

STATEMENT No. III gives twenty-one columns of said reports, to-wit:—the amount paid out for tuition by Trustees within the year; amount of school revenue for tuition apportioned semi-annually to townships, towns and cities; amount of special school tax assessed, received, and expended, within the year; congressional township school lands remaining unsold; accounts of township libraries; amount paid to trustee for managing school matters; and accounts of private schools.

There is also appended to Statement No. III, a summary for the whole State, by counties, for that part of said reports.

STATEMENT NO. III.

NO. 1. ADAMS COUNTY.

No. of Township, Town or City.	Corporate name of the Township, town, or City.	Total amount paid for Tuition within the year.		Apportionment of School Revenue to Township, Town, or City.		Amount of Special School Tax assessed, received and expended within the year.		Congressional Township School Lands unsold.		Amount paid to Trustee for managing School matters.		Private Common Schools.										
		In May.	In October.	Total within the year.	Assessed on \$100 valuation.	Assessed on each Poll.	Amount received.	Amount expended.	No. of Acres.	Estimated Value.	Income from them within the year.	No. of Books in Township Library.	No. taken out for use within the year.	No. of Books added within the year.	Condition of the Library, (Good, Tolerable, Bad.	Amount paid to Trustee for managing School matters.	No. of pupils admitted within the year.	Average length taught within the year.	Average attendance during the term.	Average cost Tuition per pupil per day.	Whole No. within the Corporation.

STATEMENT NO. X.

The following are condensed statements of Trustees, in relation to their school matters, in answer to a series of interrogatories addressed to them by the Superintendent of Public Instruction, as reported by the Examiners; which interrogatories are as follows, to wit:

Do you visit your schools each session?

How many school house lots are fenced?

How many are shaded with trees and shrubs?

How many have out-buildings necessary to a sense of decency?

How many school houses have blackboards?

How many have globes, maps, charts and books for reference, &c?

Are the schools well classified?

Are the authorized text-books used in your schools?

How many teachers fail in promoting interest and good order in and about the school room?

How many schools are opened by some religious exercises, such as prayer, reading the Bible, &c.?

What improvements have you to suggest for the better organization of the schools, or to facilitate your own duties?

What is the condition of the township libraries?

Do the patrons of the schools, and citizens generally, manifest an interest in the schools?

BENTON COUNTY.

There are twenty-six school houses in this county; seven only are fenced, four shaded by trees; six only have out-buildings necessary to decency; eighteen have blackboards, and eleven have globes and charts. Schools tolerably well classified. Nearly all fail in promoting interest and good order; few are opened by religious exercises. Patrons manifest little interest.

The Examiner suggests that all school houses be neatly finished, well furnished, necessary out buildings provided, fenced, and well shaded.

BOONE COUNTY.

Patrons generally take little or no interest in the schools. The libraries are in a poor condition; books little read. Trustees do not generally visit their schools.

CASS COUNTY.

The school houses are generally well ordered, and furnished with most of the necessary appliances for the comfort and advancement of the pupils. The system is working well accordingly as its vitality is developed.

BLACKFORD COUNTY.

The Trustees do not visit their schools; but few lots are fenced. All the houses have blackboards; three have globes and charts. The schools are not well classified. The authorized text-books are used. Two-thirds of the teachers fail in promoting interest and good order in and about the school room. But one is opened by religious exercises. The patrons generally manifest an interest in the schools. We want competent teachers.

CLAY COUNTY.

The Trustees suggest the want of more money for tuition—enough to keep the schools open six months. They want better teachers, and the means of paying them better. Teachers are not paid an equivalent for their labors and responsibility. The Director should be elected in April, to give him time to prepare for his duties. Trustees' term of office should be extended to two or three years; they would then render efficient service to the schools. Eighty-four school houses in the county; seventeen of them fenced; about half are shaded by forest trees; eleven have out-houses; seventy-seven have blackboards; all have maps; one-third have charts. Some Trustees say the schools are well classified—others say theirs are not, and others say they do not know. The authorized text-books

are used in the schools. Few failures in promoting interest and good order in and about the school room. None of the schools are opened by religious exercises. One hundred volumes of township libraries destroyed by fire; the others in good order. Patrons do not manifest much interest in the schools.

CLARK COUNTY.

A general lack of interest in the schools manifested by the people of the county. Eighty-seven school houses in the county; fourteen are fenced; twenty-two shaded with trees; twenty-nine only have out-buildings necessary to a sense of decency. All but two have black boards; seventy-six have maps and charts; two or three only, have globes and books for reference. About half the schools are well classified; about twenty-five use the authorized text-books—the balance use any kind for convenience. Four teachers are reported as failing to promote interest and good order in and about the school-room. Seventeen schools are opened by religious exercises. Teachers suggest that all the schools in the township be required to commence at the same time. Libraries are, four in good order, three in tolerable order, and three in bad order.

GREEN COUNTY.

The Trustees generally visit the schools; three or four school house lots fenced; most of them shaded by forest trees; about one-third have blackboards, all have globes, maps and charts, and books for reference; nearly all the schools use the authorized text books; teachers generally give satisfaction; two schools open by religious exercises; Trustees suggest not to change the text books so often; parents do not generally manifest much interest in the schools.

HAMILTON COUNTY.

The Trustees generally visit their schools; ten only have their lots fenced; some are shaded by trees; only fifteen have out-buildings necessary to a sense of decency; all have blackboards, nearly all have globes, maps, charts, and books for reference; the schools are tolerably well classified; a few of the teachers fail in promoting interest and good order in and about the school room; a few of the

schools are opened by religious exercises; one trustee says that prayers and the Bible are not known in his township; it is suggested that a better method of selecting teachers be adopted, give the employing of them to the trustees, without a vote of designation; most of the patrons manifest an interest in the schools; the examiner suggests that the county pay the examiner, and that the teacher pay nothing for license to teach.

HUNTINGTON COUNTY.

There are one hundred and two school houses in this county, four of which are reported fenced; most of the new houses are erected on the borders of the woods, and get the forest shade; the old log pioneers get the full benefit of the sun, most of them are without shade; twenty school houses furnished with out-buildings; there is such a pressing demand for new and commodious school buildings, that every secondary matter must give way until every district is furnished with them; nearly all the school buildings are furnished with blackboards, but not more than one in twenty are large enough, or made of the right material; about one-third are furnished with outline maps, and a few with globes; one-fourth of the schools are well classified, and nearly all use the authorized text books; about a fourth of the teachers fail in promoting good order and interest in and about the school room; near one-fourth of the schools are opened by religious exercises. In some localities, patrons manifest a good interest, in others not; there is much complaint that the school revenue is not sufficient, we cannot hire such teachers as our schools demand for the meagre salaries we can pay; the most efficient teachers are leaving the profession for the simple reason that "it will not pay." The examiner suggests that until the schools are in session, the examiners ought to spend their whole time visiting the schools for the improvement of them in the use of improved methods, and out of teaching and lecturing, and be paid accordingly.

JAY COUNTY.

The reports of the trustees show a bad condition of the common schools; only a few of the school houses have out houses, shade trees or lots fenced; some have maps and school registers; a part of the schools have blackboards of small size; the trustees say a

longer term of office would enable them to make their services more efficient; and some of the trustees suggest that districts employ their teachers, and receive and expend their apportionment of the tuition revenue; the examiner expresses the opinion that the great drawback is a lack of sufficient revenue, and of good teachers.

JEFFERSON COUNTY.

Trustees do not visit their schools much. More than half the houses are without fences, and are poorly shaded. Nearly all have out-buildings, and are provided with blackboards; the most of them have maps; very few have globes. They are well classified, and use the authorized text-books. The art of teaching is being greatly improved; and most of the teachers succeed in keeping up an interest in their schools, and in preserving good order. The schools are generally opened with religious exercises. The defect of the system is that it does not furnish sufficient money to enable us to employ better teachers. Competent teachers cannot be employed for the price limited by a part of the Trustees. The patrons generally manifest an interest in the schools. In employing teachers, some of the Trustees look more to their cheapness than to their quality.

JENNINGS COUNTY.

The answers of the Trustees to the questions propounded to them, are very unsatisfactory and incomplete. Nine of the ten Trustees complain that the patrons do not visit the schools, or manifest an interest in them. Upon inquiry, I find that the Trustees are guilty of the same dereliction of duty in visiting the schools. One of the lawful School Fathers says, "Pay the Trustees for visiting the schools." Nine of the school houses have no out-buildings attached to them. "It is a shame!" How can a teacher preserve the morals of his pupils without the provision that decency requires? The Trustees are more or less careless about the condition of their schools, and the correctness of their reports. To infuse life and vigor into the schools, they should be frequently visited, not only by the Examiner, but by the Trustees and the patrons. Teachers' associations in each township, for their mutual improvement in the art and profession of teaching, and two for the county, we recommend.

KNOX COUNTY.

The Examiner says, the complaint comes to him that the Directors are careless, and take no concern about their school houses, because they receive no pay. They permit all kinds of gatherings and meetings to take place in them, and glass is often broken, benches and desks whittled, blackboards defaced, locks broken and other damage committed. Trustees suggest to pay Directors a salary, and make them responsible for all damages which occur through their carelessness. The Examiner suggests the repeal of the provision requiring teachers to pay for licenses. Let the county pay the Examiner an annual salary, say \$200, or what would be competent.

KOSCIUSKO COUNTY.

Trustees visit the schools when absolutely compelled. Very few school house lots are fenced, or have shade trees, or out-buildings necessary for decency; nearly all have blackboards, globes, maps, charts, and books for reference. They generally use the authorized text books; are poorly classified; a majority of the teachers fail in promoting an interest and good order in their schools. Very few, if any, of the schools have religious exercises. Very few of the Trustees know but little about the libraries, but say their condition is tolerable. Not much interest is taken in the schools by their patrons.

LAGRANGE COUNTY.

Trustees do not generally visit their schools. A few of the school house lots are fenced, and a few shaded; about one half have out-buildings; nearly all have blackboards; some have charts; none have globes; some Trustees insist on dividing the money among the districts and letting them do the best they can with it. Trustees say they would visit their schools if they got paid for it, but cannot afford to without. The Examiner suggests as a problem, how he can visit ninety-eight schools, twice a year, some of them twenty-five miles from where he lives, and attend to all the other duties of his office for one hundred dollars. The weak point in our school system is the required amount of unpaid labor in the supervision of the schools.

LAWRENCE COUNTY.

Very few of the Trustees visit the schools. Not many of the school house lots are fenced; six have shade trees; very few have out-buildings; most of them have blackboards; schools are tolerably well classified; and the authorized text books are generally used. Some of the teachers fail in securing an interest in their schools. Only three schools are opened with reading the Bible; nearly all the Trustees want better qualified teachers, and think them necessary. In very few of the districts is there any interest manifested in relation to the schools; they are seldom visited; Trustees appear to give but little attention to their school duties. Trustees elected specially for the schools would furnish better qualified men.

MARION COUNTY.

We want better school-houses, with larger rooms, well ventilated, finished and furnished throughout with everything necessary for the comfort, convenience, and advancement of pupils and teachers. There is a lack of facilities for teaching, in most of our school-houses, such as blackboards, maps, charts, globes, and books for reference. Much outside improvement is needed, such as fencing, shading, ornamenting the grounds, erecting suitable out-buildings, including good wood-houses and screens. Then, we want better teachers, and more strict and regular supervision of the schools by Trustees and Examiners. The standard of qualifications of teachers can be raised to a higher point, and their efficiency much increased. As a means for the accomplishment of this, Teachers' Institutes should be provided for by law, and teachers required to attend them, and their wages to be continued. The Institutes should form complete model schools, and exhibit all the improved methods of imparting instruction, and make the poorest teachers as good as the best. Regular school exercises should be a large part of their business.

I advise the establishment of a good graded school in every township, by the Trustee, according to the plan provided by the law. It would be a step in the right direction, and indispensably necessary to the advancement of practical education. We need, as a part of our system of public instruction, a good Normal School, established on a firm basis, and supported by the State, for

the improvement of teachers, in the business and out of teaching, and to thoroughly fit them for their profession. Without such an agency, our common schools cannot possibly be supplied with the best qualified teachers. Teachers prepared by these agencies, and paid as they deserve to be, will make our schools what they ought to be. More revenue for tuition is necessary to the accomplishment of this end. Eight months school is needed; and we cannot have that with our present revenue, which is sufficient for but three or four months. It is, in the opinion of the Examiner, impossible for him to visit all the schools in his county for the pay allowed by law. The present compensation will not pay the traveling expenses which will be necessarily incurred in visiting all the schools in the county.

MIAMI COUNTY.

A part of the Trustees visit their schools; there are very few of the school-house lots fenced; many of them are shaded by forest trees; scarcely any of them are supplied with out-buildings; the most of them have blackboards, but very poor ones; none have globes; some have charts. This is all I can say from the meager reports of the Trustees.

MONROE COUNTY.

The Examiner expresses the opinion that, if his salary justified him to spend all his time in visiting and improving the schools in his county, he could make them worth to the people three times what they now are. There is great need of larger revenue for school purposes.

MORGAN COUNTY.

The Trustees, with one or two exceptions, visit their schools each session. But few of the school-house lots are fenced; none shaded, except by the natural forest growth. A few have out-houses; all have blackboards; but few have globes, maps, charts, or books for reference; generally well classified; and the authorized text-books are used in a part of the schools only. A majority of the teachers promote an interest and good order in and about their schools. They are not generally opened by any religious exercises. The li-

braries are in tolerable good order. The Trustees recommend increased taxation for tuition purposes. More revenue is wanted to make the schools interesting. Amend the law so as to admit no pupils into the common schools who are less than seven years of age; and further amend so that the Trustees have the designation as well as the employment of the teachers. The Examiner suggests that all persons who have had anything to do with administering the school law will admit that the amendments above mentioned would be an advantage to it.

PARKE COUNTY.

Only a very few Trustees visit their schools. We have one hundred and thirteen school houses in the county; ten of which only, are fenced; in one township, the Trustee reports all fenced. Most of them are shaded by forest trees; very few have out-buildings of any kind; in one township the patrons object to having any. Nearly all are furnished with blackboards; a few only with globes; and most of them with maps, and charts, and books for reference. They are well classified, and use the authorized text books. Teachers conduct and manage their schools well, and promote good order, &c. In some schools religious exercises are held, in others not. The condition of the libraries is said to be good in some of the townships, in some tolerable, in some bad. In some of the townships the patrons of the schools manifest a good deal of interest in them, and in others they manifest no interest whatever. Trustees say, give us more school revenue; enough for six months school at least. The teachers would do well in their schools if they would have a fair chance by a lengthened term of school. Elect separate Trustees for the schools, and for three years. The short term of one year renders the Trustee powerless for good. The Trustees should be better paid. The Examiner should be *de facto* Superintendent of Public Instruction for his county, and required to employ his whole time in the schools, when they are in session, and be paid accordingly.

The examination of teachers for license should be free, and the time of a first class license should extend during good behavior. The Examiner, with the assistance of the first class teachers of his county, should be required to hold at least two institutes in his county each year, from a week to a month sessions, for the improvement of the teachers, and especially for the improvement of

the second and third class of them. The Examiner advises to either dispense with the school tax altogether, and return the taxing power to the people, or give an income sufficient for seven months, at least, of common school in each year. Less than that will not be satisfactory. A contingent provision for extending them longer is recommended.

PERRY COUNTY.

Trustees generally visit the schools. About one lot in ten is fenced, and about one-fourth shaded; a portion of them have out-buildings—in some townships there are none. One-third has black-boards, maps and charts, and very few, if any, have globes. The schools are well classified, and nearly all of them use the authorized text-books. Several of them have religious exercises. Most of the teachers succeed well in promoting interest and good order in their schools. In some localities the patrons take quite an interest in the schools, and in others they take no such interest. Nearly all the trustees say, increase the school revenue sufficient for six or seven months' school, and compel students to attend regularly, under the penalty of being dismissed from the school for the current term. The trustees generally show an energy and interest in their school duties worthy of the cause.

PUTNAM COUNTY.

The trustees generally visit their schools a few times during their session. But few of the school house lots are fenced, and very few shaded or supplied with out-buildings of any kind. Nearly all have black-boards, and nearly all have outline maps and school registers. Schools are tolerably well classified, and generally use the proper text books. Nearly all the teachers succeed in giving satisfaction. Patrons manifest an interest in some localities, and in others none. Not half of the schools have any religious exercises at the opening of the school. The entire time of the Examiner should be devoted to the schools when in session, and paid for at a living rate.

RUSH COUNTY.

O'Brien Gwynne, Esq., Trustee of Ripley Township, in this

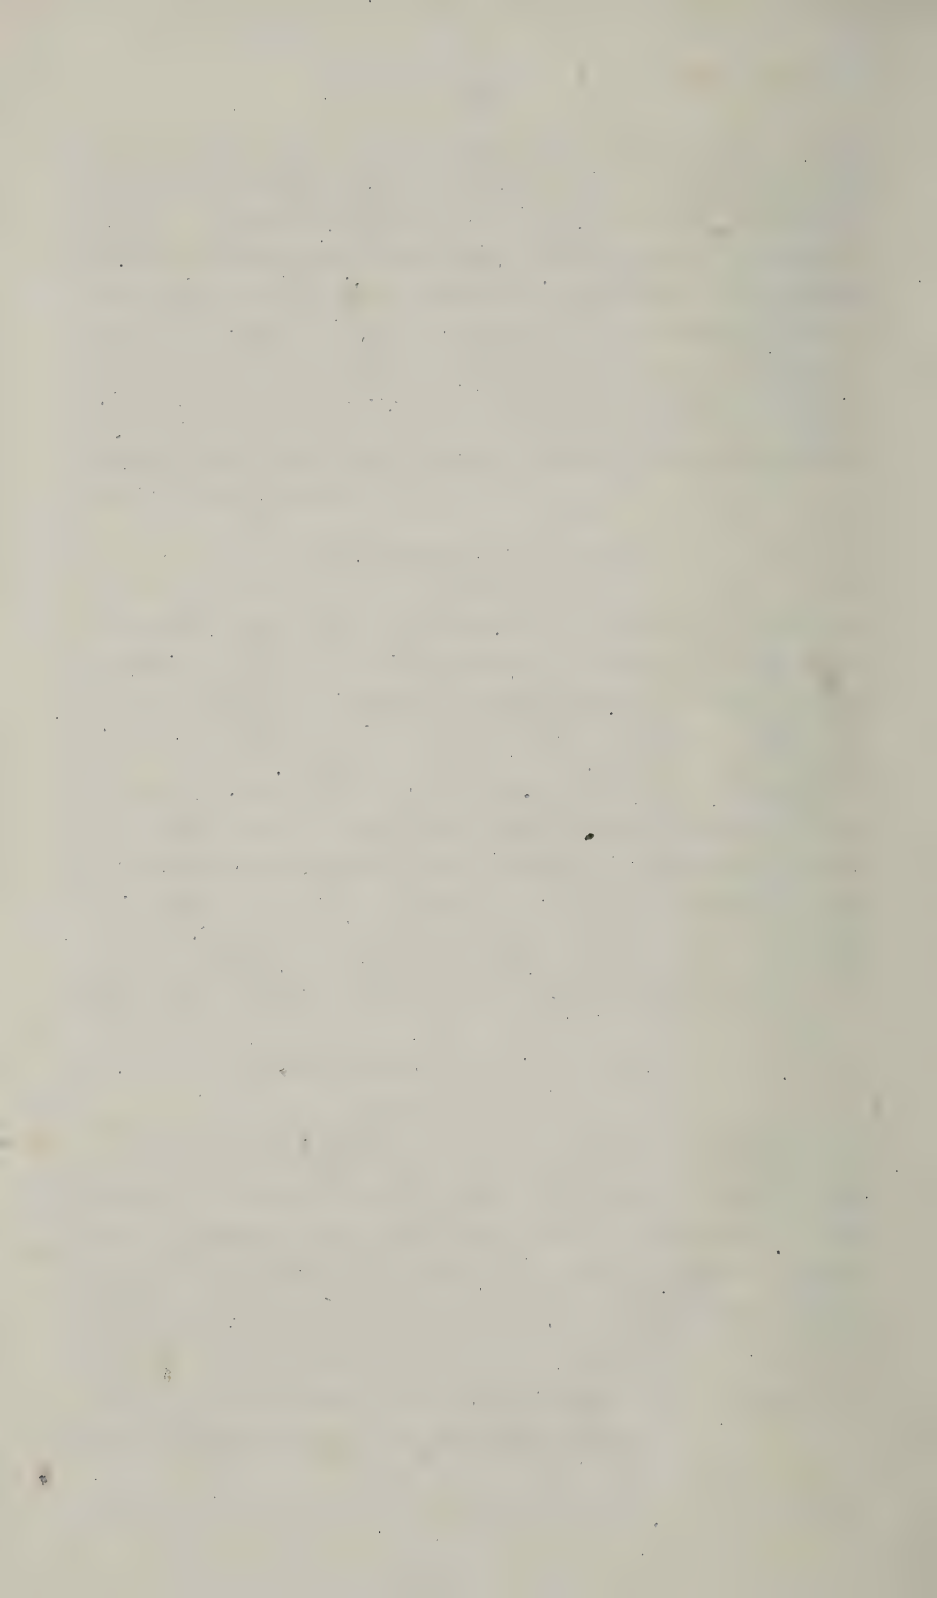

county, reports that he has taken great pains to put the school houses in his township in good order, and to suitably fit up the property connected with them, by fencing the lots, buiding out-buildings, planting shade trees, &c., until the property set apart for that purpose now presents a respectable appearance. The township has done its part of the undertaking for the common schools, by fitting up the school houses in a commodious manner; it now calls on the State to do its part by furnishing revenue to pay for a sufficient amount of tuition. Give us eight months school in a year, or relinquish the taxing power for that purpose, and restore it to the people for their exercise.

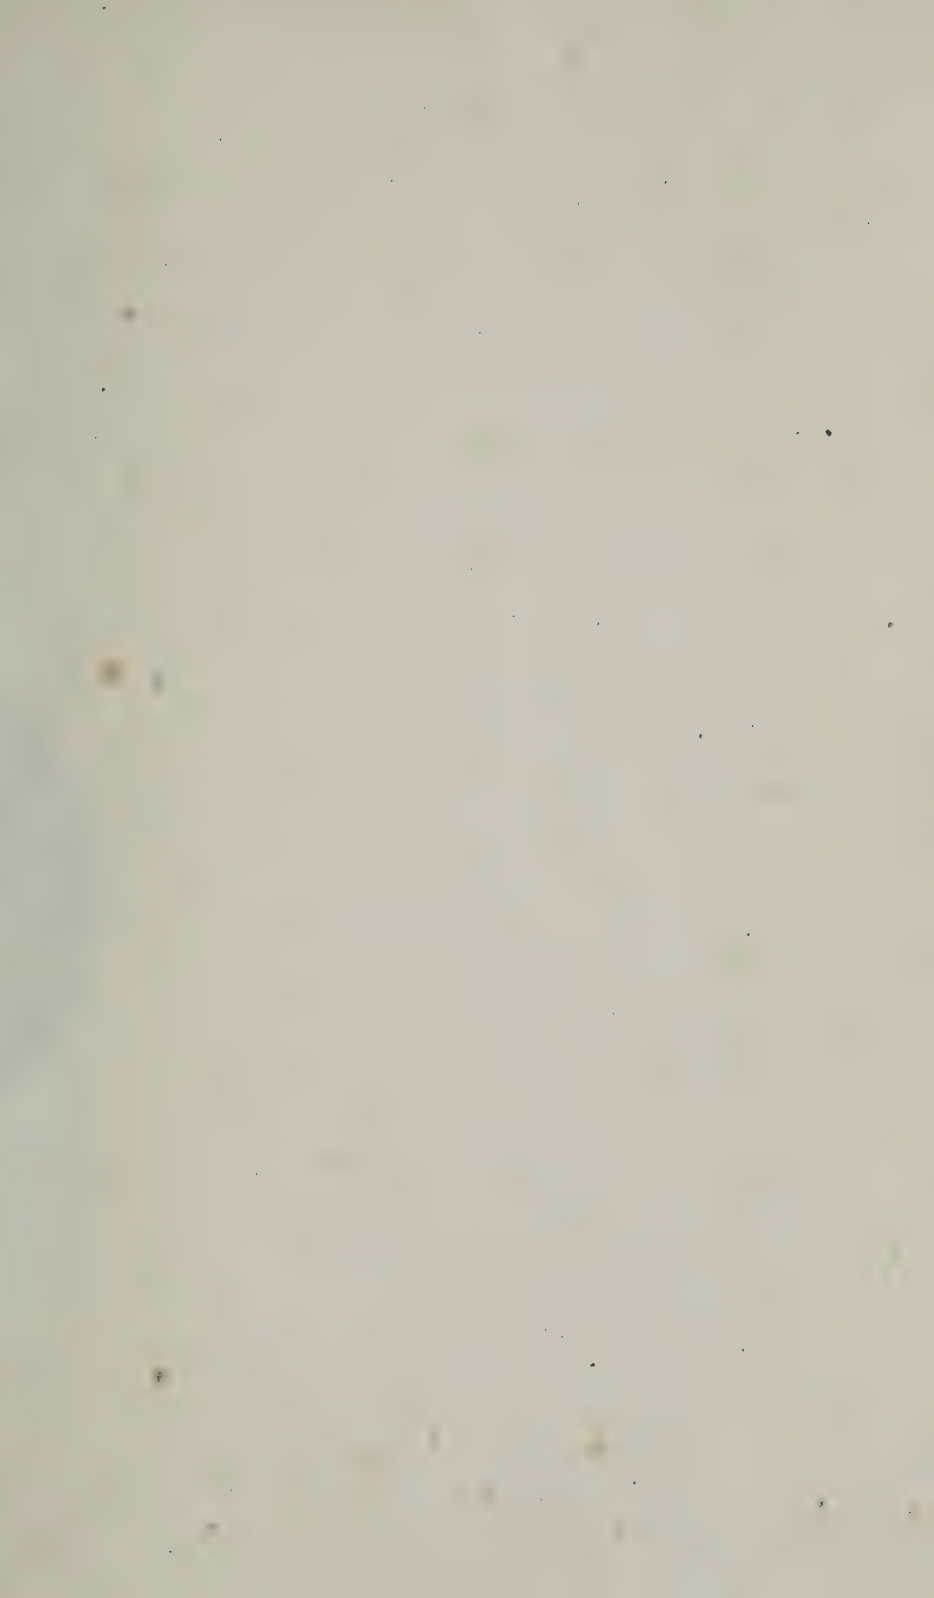

ST. JOSEPH COUNTY.

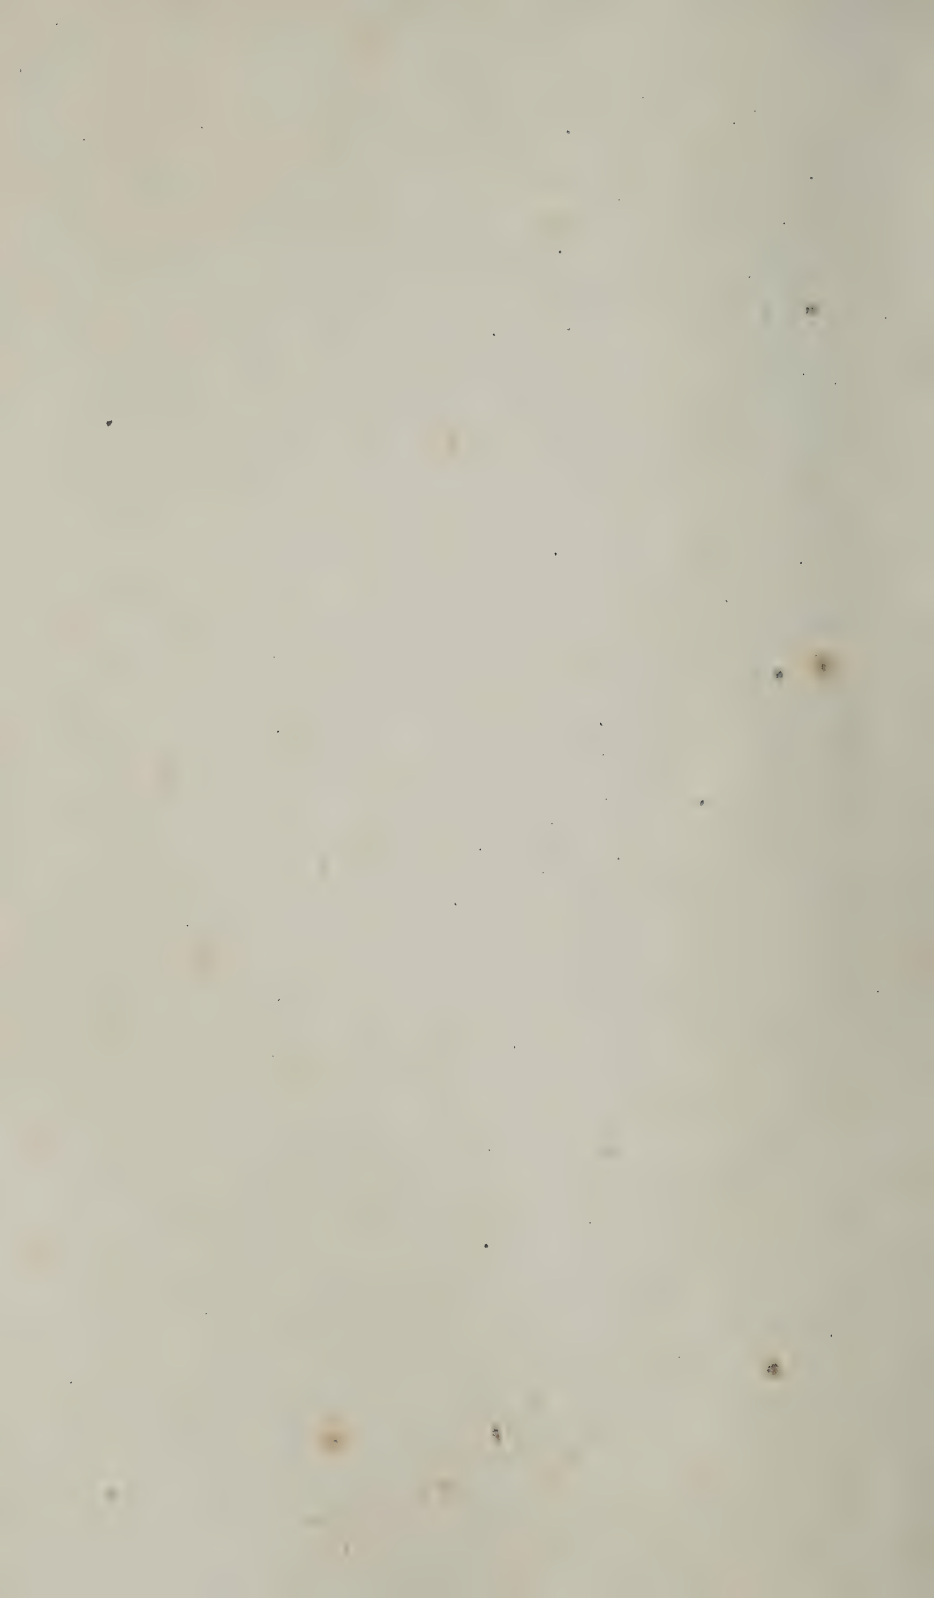

There are eight townships in this county from which I am unable to obtain reports. The Trustees pay no attention to my urgent requests and solicitations, and the requirements of the law, and the few who did report, did it so poorly, that they amount to but very little. They show that a very few of the school house lots are fenced, or shaded, or have out buildings; about half of them have blackboards, none of them globes, maps or charts. The authorized text-books are used in nearly all the schools. One school is opened with religious exercises. There is no interest in the schools manifested by their patrons. The examiner promises to see to it in the future that Trustee's reports are more full and correct, and thinks he will have personal interviews with them for that purpose.

SWITZERLAND COUNTY.

I suggest that the Director of each school be furnished with a copy of the school law. The circular from the department to the Trustees, I think will do much good. At present there is a great want of interest in the public schools, both by patrons and officers. Nearly all have blackboards; some have outline maps, small globes, Wilson's charts, &c. But there is scarcely an out-building belonging to any school house in the county, except at Vevay and Patriot. In some of the townships there is not a school house lot fenced, or a shade tree to be found. In several instances the township has no title to the school house lots which they occupy.
